

References and Bibliography on Water Studies

by Silvia Aloisio

The following bibliography is a selection of some references coming from the authors of the articles, with an addition of other volumes and papers, selected to support the comprehension and the study of the issue of this book. Facing the possible future of water cities across five continents, means approaching different aspects, problems and working methods, going through history, science, geography, urban planning and architecture. Six topics have been identified to make the reading of this bibliography easier and to clarify the main aspects of the problem: “*projects and plans to respond to climate change*”, “*water management*”, “*designing with water*”, “*rebuilding after the disaster*”, “*geography in motion*”, “*knowing history to design the future*”. Another section is dedicated to the books, mentioned in various articles, that can give us a larger vision through their theories, even if they are not immediately linked to the main topics covered.
